I have been learning about Echo Lake. Echo lake is a very clean lake. The lake is clean because people care about it and work hard to keep it clean. They are teaching us how to take care of the water in the lake. There is a lot of trash in other lakes, oceans, and ponds around the world. When you go swimming in a lake, do you ever think about what you are swimming in? You might be swimming in trash, like bottles, plastic bags, and algae. This is why you should take a shower after you go swimming. The garbage left in the lake can kill the fish and animals who drink the water. We need to start keeping the garbage out of the lake, oceans, and ponds so animals can live in a healthy environment. Thank you for teaching me about how to take care of Echo Lake.
